## Conveyors

### Drum Conveyors

1. DRUM PALLETISER

**MARWEL** Conveyors have always aimed to work in partnership with its customers to provide, first and foremost, a complete solution to their handling requirements. With its own design team, its own control system company and over 50 years of experience **MARWEL** Conveyors is in a unique position to meet its obligations to the partnership.

A few of the many types and applications for **MARWEL** drum conveyors are illustrated on this leaflet. Our extensive experience in this field, and in many industries, leaves us well qualified to give practical help and advice in selection of suitable conveyors.

3. ACCUMULATING CONVEYOR

# Typical Specifications

**MARWEL** Conveyors has supplied many of the leading manufacturers and oil companies with high speed drum handling equipment. These have included conveyors for filling, weighing and storage of drums. Systems have included automatic palletisers, stretch and shrink wrappers, double stackers, elevators and many other items of specialised handling equipment.

In addition to our normal range of drum conveyors **MARWEL** also design and manufacture conveyor systems for the drum manufacturing industry. These systems are designed to carry the drum through the various stages of manufacture, from sheet steel to finished drum. In particular we have a range of conveyors and rotating units specifically designed to operate inside spray booths. These are usually flame proof with intrinsically safe control systems. They achieve high outputs combined with good quality drum paint finishes.

Drums can be handled on powered rollers, accumulating rollers or gravity rollers, twin chain conveyors or slat conveyors.

The conveyors can be designed to handle steel or plastic drums in a wide range of sizes.
